

Angular – API Integration & Authentication (Full Source Code)

BRD-API-Integration-Authentication-Flow-Mocked--main/README.md

```
# BRDAPIIntegrationAuthenticationFlowMocked  
BRD - API Integration & Authentication (Angular)\
```

1. Overview

This project is an Angular-based frontend application that demonstrates API integration, authentication flow, route protection. The application simulates a real-world login flow with token storage, protected routes, and dashboard data fetching.

2. Business Objective

To simulate a real-world frontend application that:

- Authenticates users via API or mocked logic
- Stores authentication tokens
- Protects routes based on authentication state
- Handles API loading and error scenarios gracefully

3. Technology Stack

- Category■Technology
- Framework■Angular 15
- Language■TypeScript
- HTTP Client■Angular HttpClient
- Routing■Angular Router
- State■LocalStorage
- APIs Used■FakeStore API, JSONPlaceholder
- Tooling■Angular CLI

4. Functional Scope

4.1 Login

- Username & Password input
- Authentication via FakeStore API
- Token stored in localStorage
- Loader displayed during API call
- Error message displayed on failure
- Retry option available

4.2 Route Protection

- Dashboard route protected using AuthGuard
- Unauthorized users redirected to Login page
- Direct URL access blocked without authentication

4.3 Dashboard

- Accessible only after successful login
- Fetches user data from JSONPlaceholder
- Displays loader until data loads
- Logout button available

4.4 Logout

- Clears token from localStorage
- Redirects user to Login screen

5. Non-Functional Requirements

5.1 Clear Separation of Concerns

- Components → UI & interaction
- Services → Business logic & API calls
- Guards → Route protection
- Routing Module → Navigation rules

5.2 Predictable State Flow

- Authentication state based on token presence
- Explicit loading and errorMessage flags
- Deterministic login → dashboard → logout flow

5.3 User-Friendly Messages

"Logging in..." loader
Clear error messages
Retry option for failed API calls

This project was generated with [Angular CLI](https://github.com/angular/angular-cli) version 15.2.11.

Development server

Run `ng serve` for a dev server. Navigate to `http://localhost:4200/`. The application will automatically reload if you change

Code scaffolding

Run `ng generate component component-name` to generate a new component. You can also use `ng generate directive|pipe|service|class|enum`

Build

Run `ng build` to build the project. The build artifacts will be stored in the `dist/` directory.

Running unit tests

Run `ng test` to execute the unit tests via [Karma](https://karma-runner.github.io).

Running end-to-end tests

Run `ng e2e` to execute the end-to-end tests via a platform of your choice. To use this command, you need to first add a platform

Further help

To get more help on the Angular CLI use `ng help` or go check out the [Angular CLI Overview and Command Reference](https://cli.angular.io/)
